Not advice. Educational only — not financial, tax, or legal advice. Options involve substantial risk and are not suitable for every investor; read the OCC options disclosure document (Characteristics and Risks of Standardized Options) before trading. Thresholds and rules below are US-federal, were checked on the date shown, vary by broker and state, and change — verify with the firm and a licensed professional before acting. Nothing here promises or implies returns, and most traders never reach the later stages.

Overview

Each stage is a milestone of trading capital or net worth. Money is only a proxy: what actually moves you forward is a verifiable track record, survival through bad markets, and the infrastructure to carry more risk safely. Access gets better at each gate; the strategies do not automatically get better.

Be honest about the arithmetic. Turning $10k into $1B is a 100,000× gain — about 30% a year, every year, for 44 years. Real paths to the top stages almost always add outside capital (running a fund or family office), business income, or both, on top of compounding a personal account.

Each stage card covers the same ten topics so you can compare stages side by side, and links to the parts of this app that help at that stage.

CHECK BEFORE RELYING ON IT

- **Pattern-day-trader rule is gone.** FINRA replaced the 4-trades-in-5-days / $25,000 rule with intraday margin standards effective 2026-06-04; brokers may phase in until 2027-10-20, so some may still count day trades for a while [1,2,3].
- **Options approval levels are broker-specific.** "Level 2" means different things at Schwab, Robinhood, and IBKR; Robinhood tops out at Level 3 (no uncovered options) and allows only Level 2 in IRAs [5,7].
- **Portfolio-margin minimums vary and change.** Verified on broker sites: IBKR $110k to open / $100k to keep, Schwab $125k / $100k, tastytrade $125k / $100k (some third-party reviews still quote $175k). Fidelity's $150k comes from a third-party review only [10,11,12,13].
- **Qualified-client thresholds rose on 2026-06-29** to $1.4M under management or $2.7M net worth; earlier contracts are grandfathered [35].
- **Accredited-investor exam and credential routes are proposals only** (comments due 2026-12-04). Today's tests are $1M net worth excluding the home, $200k / $300k income, or a Series 7, 65, or 82 license [33,34].
- **Private-bank minimums are mostly unpublished.** Figures here are stated tiers where a bank publishes one and indicative otherwise [46,47].
- **Cross-margining** between OCC securities options and CME futures is generally limited to clearing members and market professionals; the April 2026 end-user expansion covers Treasuries and rate futures (FICC–CME), not equity options [20,21].
- **Taxes are US-federal for 2026.** State income tax, residency rules, and non-US situations differ; tax law can change with any new bill.

$0 → $10k

Stage 1 · Foundation

Build income, an emergency fund, and the habit of logging every trade. Options are a small learning sleeve, not the plan.

WHAT SUCCESS LOOKS LIKE

- A job or business funds the account; trading P&L does not pay bills yet. Keep 3–6 months of expenses outside the brokerage.
- Every trade is journaled: thesis, max loss, exit plan, result. A 100-trade sample matters more than any single winner.
- Max loss per trade ≤ 1–2% of the account; a monthly drawdown stop (e.g. -10%) pauses trading for a review.
- Success here = still solvent, rules followed, and an honest win rate and expectancy after a few hundred trades.

OPTIONS STRATEGIES

- Read the options disclosure document first [4]. Paper-trade, then trade one-lot defined-risk positions.
- Long calls and puts only as small, pre-sized bets. Covered calls and cash-secured puts once you can hold 100 shares — small ETFs and XSP keep notional low.
- Vertical debit and credit spreads ($1–$5 wide) once approved: the max loss is known at entry.
- **ODTE caution:** ODTE is about 56% of index-options volume [16] and gamma near expiry is extreme. If you try it: one contract, defined risk, and a daily loss cap.

BROKERAGES & PLATFORMS

- A $0-commission retail broker with real options tooling: Robinhood (Level 2, then Level 3 spreads in a margin account) [6], Schwab thinkorswim, Fidelity, tastytrade, or IBKR.
- Choose on risk graphs, multi-leg tickets, and fill quality — not sign-up bonuses.
- Cash-settled index options (SPX, XSP, NDX, RUT, VIX) are available even at retail brokers like Robinhood, with extra per-contract exchange fees [8].

ACCOUNT FEATURES & THRESHOLDS

- Options approval levels gate strategies, and the names differ by broker [5]. Spreads generally need a margin account.
- No more PDT: the $25k / four-day-trade rule was replaced by intraday margin on 2026-06-04 (broker phase-in to 2027-10-20) [1]. Margin accounts still need $2,000 equity; Reg T is 50% initial and at least 25% maintenance [3,11].
- Cash accounts avoid margin calls but trade only settled funds (T+1).

BANKING & CREDIT

- No-fee checking plus a high-yield savings account for the emergency fund; stay within FDIC limits ($250k per bank per ownership category).
- Build credit with one card paid in full. Never fund trading with credit cards or personal loans.
- Know what SIPC covers: broker failure up to $500k including $250k cash — not market losses [23].

TAXES & ENTITIES

- Gains held a year or less are taxed as ordinary income. Options on stocks and ETFs (SPY, QQQ) follow normal capital-gain rules.
- Wash sales: a loss is disallowed if you buy a substantially identical security within 30 days before or after — including in your IRA, where the loss is lost for good [27].
- Fund a Roth IRA if eligible ($7,500 for 2026) [29]; IRA options are usually long or covered only (Robinhood IRAs: Level 2 only) [7].
- Make quarterly estimated payments once trading gains mean you will owe $1,000 or more [28].

REGULATORY STATUS

- Retail customer. Your broker must deliver the options disclosure document and judge whether options suit you before approving a level [4].
- The first future gate is accredited investor: $1M net worth excluding the home, $200k / $300k income, or a Series 7, 65, or 82 license [33].

OPPORTUNITIES

- The cheapest edge is education: Cboe and OCC courses, broker classes, and standard texts (Natenberg's Option Volatility & Pricing, Sinclair's Volatility Trading).
- An employer 401(k) match and an HSA come before speculative capital.

TEAM & INFRASTRUCTURE

- You, a journal, and tax software. This app's ledger and risk profile cover the basics.

FAILURE MODES & GUARDRAILS

- Ruin risk: one undefined-risk short option or an oversized 0DTE trade can wipe out a small account. Defined risk only.
- Behavior: revenge trading, doubling down, averaging into losers. Write the rules before the session and stop at the daily cap.
- Do not trade money you need within 12 months.

IN THIS APP

- **Risk profile** — plot the payoff before entering any spread.
- **Trade journal** — write the plan before entry and review every trade.
- **Cashflow** — keep the emergency fund and runway visible.

$10k → $25k

Stage 2 · Defined-risk apprentice

Prove a repeatable defined-risk process over a few hundred trades; size from rules, not conviction.

WHAT SUCCESS LOOKS LIKE

- Positive expectancy after costs over 200+ logged trades, max drawdown under ~20%, and no losses from broken rules.
- A written playbook: setups, sizing formula, exits, and daily and weekly loss caps (this app's sleeve uses d(a)/2 as the daily brake).
- Compound rather than withdraw; living costs still come from work.

OPTIONS STRATEGIES

- Credit spreads and iron condors on liquid ETFs and indexes (SPY, QQQ, IWM, XSP), taking profit at 30–50% of max and stopping at a preset loss.
- Calendars and diagonals to learn vega and term structure.
- XSP is 1/10 the size of SPX — cash-settled, European-style, and a §1256 contract — so you get index tax treatment at small size [8].
- Keep any 0DTE as a separate, small, defined-risk book; its statistics differ from 30–45 DTE trades.

BROKERAGES & PLATFORMS

- If fills or multi-leg routing are poor, move to tastytrade, thinkorswim, or IBKR.
- Compare per-contract costs: equity options run $0–$0.65, and index options add exchange fees (Robinhood: $0.35 with Gold vs $0.50) [9].

ACCOUNT FEATURES & THRESHOLDS

- Request spread approval in a margin account (e.g. Robinhood Level 3, Schwab Level 2, IBKR Level 3) [5].
- With PDT gone, the real limits are intraday margin and your own per-session trade cap [1].
- A futures account is optional: micro E-mini (/MES) futures and options for learning. Futures cash is not SIPC-protected [23].

BANKING & CREDIT

- Keep idle cash in an HYSA or a Treasury money-market sweep; broker sweep rates vary widely.
- Aim for a credit score above ~740 before you need mortgages or credit lines. Still no leverage outside the account.

TAXES & ENTITIES

- Track §1256 and equity-option P&L separately. Index options (SPX, XSP, NDX, RUT, VIX), futures, and futures options are §1256 contracts: marked to market at year-end and taxed 60% long-term / 40% short-term regardless of holding period, on Form 6781 [24].
- A net §1256 loss can be carried back 3 years against earlier §1256 gains (individuals only) [24].
- Estimated-tax safe harbor: pay 100% of last year's tax in quarterly installments (110% if last year's AGI was over $150k) [28].

REGULATORY STATUS

- Still retail. Read the broker's margin and options agreements, especially its right to liquidate without notice.

OPPORTUNITIES

- Interest on cash and fully paid securities lending at some brokers (IBKR SYEP: margin accounts, or cash accounts with more than $25k liquid net worth) [15].

TEAM & INFRASTRUCTURE

- A CPA who knows Form 6781 and wash sales, once trading tax is meaningful.
- Keep your own copies of statements and trade logs — the 1099-B is not your journal.

FAILURE MODES & GUARDRAILS

- Overtrading after PDT: more trades are not more edge. Keep a per-session round-trip cap.
- Concentration: SPY + QQQ + IWM short premium is one bet (see docs/high-risk-sleeve-diversity.md).
- Short-vol math: iron condors lose small often and large occasionally — size so the large loss is survivable.

IN THIS APP

- **Trade advisory** — Condor setup sizes one iron condor from IV and IVP and gates on price.
- **Portfolio allocation** — split stable vs high-risk capital with the sleeve script.
- **Backtesting** — replay archived GEX mornings through the ticket rules.

$25k → $100k

Stage 3 · Consistent operator

Run trading like a small business: a stable process, monthly reviews, and a clear split between a stable core portfolio and a risk sleeve.

WHAT SUCCESS LOOKS LIKE

- 12+ months of record with Sharpe and Sortino you can compute, max drawdown within 20–25%, and size tied to account value.
- Most capital sits in a stable core (index funds, stocks); options are a capped sleeve — the portfolio script here limits the high-risk share.
- You know your monthly expectancy and its spread, not just the best month.

OPTIONS STRATEGIES

- Index credit spreads and iron condors on SPX, XSP, NDX, or RUT for §1256 tax treatment and cash settlement with no early assignment [8].
- Covered calls or collars on core holdings; put-writing on names you want to own.
- A standing tail-hedge budget (e.g. 0.5–1% of the account a year in put spreads or VIX calls).
- Read dealer gamma and IV rank: sell premium into positive gamma and rich IV; avoid selling into negative gamma with cheap vol.

BROKERAGES & PLATFORMS

- Professional platforms: IBKR Pro, tastytrade, Schwab thinkorswim; Robinhood Legend for charts. A second broker gives redundancy.
- API access (IBKR, tastytrade, Schwab) for journaling and automation; this app talks to the Robinhood Agentic account through MCP.

ACCOUNT FEATURES & THRESHOLDS

- Uncovered (naked) approval usually needs more experience and equity, and is a prerequisite for portfolio margin [11].
- Futures and futures options (/ES, /MES, /NQ) live in a separate futures account with risk-based SPAN margin.
- Once you hold 200+ contracts on the same side of one underlying, your broker reports it to the Large Options Position Reporting system [22].

BANKING & CREDIT

- Relationship tiers start: Chase Private Client targets $150k+ in deposits and investments [46]. Expect fee waivers and a banker, not better rates.
- A margin loan is your first credit line — variable rate and callable. Treat it as a short liquidity bridge.

TAXES & ENTITIES

- Check trader tax status (TTS): substantial, continuous, regular trading that profits from short-term swings [25]. It allows business-expense deductions, but there is no bright-line test.
- The §475(f) mark-to-market election is due by the unextended due date of the prior year's return (April 15 for individuals), or within 75 days for a brand-new entity [25,26]. It makes securities gains ordinary and removes wash-sale and $3k capital-loss limits; §1256 contracts keep 60/40 unless separately elected.
- A Solo 401(k) needs self-employment income — trading gains are not earned income. 2026 limits: $24,500 deferral, $72,000 total [29].

REGULATORY STATUS

- Still retail. Accredited status may come first through income ($200k single / $300k joint for two years) [33].

OPPORTUNITIES

- Direct indexing and tax-loss harvesting on the core portfolio.
- Cash yield via T-bills; SPX box spreads can lend or borrow near T-bill rates with §1256 treatment (advanced — understand pricing and settlement first).

TEAM & INFRASTRUCTURE

- A CPA experienced with traders; a trader-tax specialist before any §475 election.
- A daily risk view: Greeks by underlying, beta-weighted delta, and P&L at ±5% / ±10% moves and +10 vol points.

FAILURE MODES & GUARDRAILS

- Lifestyle creep after good months — set a fixed draw and keep compounding.
- Leverage creep through margin: track gross notional ÷ account value.
- Early assignment on American-style ETF short options, especially around ex-dividend dates.

IN THIS APP

- **Risk profile** — stress the book across price and time.
- **GEX advisory** — chain-scan dealer gamma before selling premium.
- **Accounts** — track balances across broker accounts.

$100k → $500k

Stage 4 · Portfolio-margin candidate

Risk-based margin and multi-account infrastructure arrive; the job becomes managing leverage you are now allowed to take.

WHAT SUCCESS LOOKS LIKE

- 2–3 years of record, through at least one volatility spike, with drawdown inside plan.
- Risk is measured as stress loss (e.g. index -10%, vol +15) as a share of the account — not just per-trade max loss.
- Household runway of 12+ months even if trading returns zero.

OPTIONS STRATEGIES

- Portfolio margin makes short strangles and ratio spreads capital-efficient — and dangerous. Keep defined risk unless stress limits are strict.
- Futures options on /ES: §1256 treatment, nearly 24-hour trading, and efficient margin.
- Volatility structure trades: calendars across VIX regimes, put-spread collars, risk reversals for skew.
- If you trade 0DTE, cap the daily max loss at about 1% of the account.

BROKERAGES & PLATFORMS

- Portfolio-margin minimums: IBKR $110k to open / $100k to keep [10]; Schwab $125k / $100k [11]; tastytrade $125k / $100k [12]; Fidelity reportedly $150k [13]. Robinhood does not advertise portfolio margin.
- Smart routing and algorithmic orders (adaptive, VWAP) through a direct-access broker such as IBKR; Level II and professional data.

ACCOUNT FEATURES & THRESHOLDS

- Portfolio margin uses OCC's TIMS risk model for securities; futures are margined separately; IRAs and cash accounts are usually excluded [12].
- The new intraday-margin calculation applies to regular margin accounts, not portfolio-margin accounts [1] — but PM calls are due in one or two business days [12].
- Margin interest tiers down with balance; compare rates across brokers.

BANKING & CREDIT

- Securities-based lines of credit start around $100k of collateral value — e.g. Schwab's Pledged Asset Line runs SOFR + 4.40% at $100–250k down to SOFR + 2.40% at $2.5M+ [48]. Proceeds can't buy securities.
- Advance rates are roughly 50–70% on diversified equities; options are not eligible collateral [48].
- Mortgages: lenders may count trading income from two years of returns; asset-depletion (asset-based) loans count liquid assets as income, mostly in non-QM programs with varying terms.

TAXES & ENTITIES

- With TTS, a trading entity (LLC taxed as a partnership, or an S-corp) can pay health insurance and retirement contributions through salary; a new entity can elect §475 within 75 days of formation [26].
- Margin interest is investment interest, deductible up to net investment income if you itemize (§163(d)).
- Brackets top out at 37% (made permanent in 2025) plus the 3.8% net investment income tax above $200k / $250k MAGI [31].

REGULATORY STATUS

- Accredited investor by net worth may arrive (over $1M excluding the home) [33].
- Trading anyone else's money for pay — even family — can make you an investment adviser. Talk to a securities lawyer first [42].

OPPORTUNITIES

- Fully paid lending on core shares [15]; box-spread financing as cheaper-than-margin leverage.
- Interval funds and non-traded BDCs offer private credit to non-accredited investors — with illiquidity and high fees.

TEAM & INFRASTRUCTURE

- CPA plus a tax attorney for the entity; bookkeeping for the entity.
- Risk software (broker risk navigators, OptionNet Explorer, or custom scripts) producing a daily stress report.

FAILURE MODES & GUARDRAILS

- Portfolio-margin leverage is the classic account killer: short-vol books blew up in Feb 2018 and March 2020. Cap stress loss at around 15–20% of the account.
- Brokers can raise PM requirements at any time without notice [12].

IN THIS APP

- **Risk profile** — what-if price and time before adding PM leverage.
- **Portfolio allocation** — keep the sleeve a minority of the account.
- **Cashflow** — confirm runway without trading income.

$500k → $1M

Stage 5 · Semi-professional

Approaching the accredited and qualified-client gates. Decide whether you are building a personal fortune or an investment business.

WHAT SUCCESS LOOKS LIKE

- Audit-ready records: statements reconcile to your ledger, and returns are time-weighted so they could be shown to investors.
- A written risk policy: drawdown budget, position limits, and what happens when they are hit.
- If trading pays the bills, withdrawals stay well below expected return.

OPTIONS STRATEGIES

- Ladders of 30–60 DTE SPX put spreads and short puts with hedge overlays.
- Earnings volatility trades on single names (sell or buy straddles vs the implied move) with per-name limits.
- Dispersion ideas — index implied vol vs single-stock implied vol, which Cboe tracks as DSPX [18] — at retail scale via index short vol plus single-name long vol.

BROKERAGES & PLATFORMS

- More than one broker: a direct-access broker for execution and a large custodian for banking and lending.
- Some brokers restrict 0DTE in single-stock and ETF options for smaller accounts (Fidelity reportedly below $1M equity; SPX/XSP exempt) [13].

ACCOUNT FEATURES & THRESHOLDS

- Ask about request-for-quote and complex-order-book handling for larger spreads.
- SIPC protects up to $500k per customer capacity; check the broker's excess-SIPC insurance and spread accounts across capacities (individual, joint, trust) [23].

BANKING & CREDIT

- Private-client tiers: J.P. Morgan Private Client is for clients investing $1M+ [46]; Merrill, Wells, and Citi have similar tiers with relationship pricing on mortgages and credit lines.
- Lombard loans (the European name for loans against liquid portfolios) start to show up through private banks.

TAXES & ENTITIES

- Quarterly tax projections: loss harvesting, §1256 carrybacks, and giving appreciated shares through a donor-advised fund.
- State residency matters: state income tax ranges from 0% to over 13%; moving before a big year means a real change of domicile, and some states audit former residents.

REGULATORY STATUS

- Accredited investor (over $1M net worth excluding the primary home) opens Reg D private placements and private funds [33].
- The proposed FINRA accredited-investor exam and new credential routes are out for comment until 2026-12-04 — not in effect [34].

OPPORTUNITIES

- Private funds, angel deals, and syndicates (accredited only). Weigh fees (often 2-and-20), lockups, and late K-1s.
- Bank structured notes (buffered notes, autocallables): issuer credit risk, embedded fees, and poor liquidity.

TEAM & INFRASTRUCTURE

- A fee-only fiduciary adviser or private-client banker for the non-trading balance sheet; an estate attorney for a will and revocable trust.

FAILURE MODES & GUARDRAILS

- Overconfidence at the $1M mark — size by the risk policy, not the milestone.
- Private deals are illiquid; cap them as a share of net worth.

IN THIS APP

- **Accounts** — reconcile every broker account to the ledger.
- **Taxes** — keep estimates and filings in one place.

$1M → $5M

Stage 6 · Accredited & qualified client

Wealth-management access opens. Separate personal wealth, trading capital, and any manager ambitions into distinct structures.

WHAT SUCCESS LOOKS LIKE

- The trading sleeve is a minority of net worth, so a sleeve blowup cannot threaten the household.
- If managing outside money is the goal: a 3+ year verifiable (ideally audited) track record.

OPTIONS STRATEGIES

- Portfolio hedges: SPX put spreads or collars on concentrated holdings; FLEX options for custom strikes and dates (minimum size is one contract; broker access varies) [17].
- Volatility relative value: VIX futures and options term structure, SPX calendars, and Cboe S&P 500 Variance futures as a listed, cleared alternative to OTC variance swaps [19].
- Box spreads for financing; synthetics to manage tax lots.

BROKERAGES & PLATFORMS

- Private-wealth platforms (Morgan Stanley, Merrill, J.P. Morgan, UBS) for custody and lending, plus a professional execution broker for trading.
- Block-size and RFQ execution; broker-assisted orders in SPX open outcry on the Cboe floor.

ACCOUNT FEATURES & THRESHOLDS

- Qualified client — required for performance-fee arrangements: $1.4M under management with the adviser or $2.7M net worth from 2026-06-29 (up from $1.1M / $2.2M) [35].
- Account titling (trusts, LLCs) and excess-SIPC coverage start to matter for asset protection [23].

BANKING & CREDIT

- Credit-line pricing improves with size (e.g. SOFR + 2.90% at $1–2.5M of collateral on Schwab's PAL) [48]; private banks price tighter for whole relationships.
- Jumbo mortgages with asset-based underwriting; pledged-asset mortgages to avoid selling appreciated stock.

TAXES & ENTITIES

- Estate planning: the federal estate and gift exemption is $15M per person in 2026 ($30M per couple), indexed with no sunset; the annual gift exclusion is $19,000 [30]. Start with a revocable trust; SLATs and GRATs come later.
- Entities: a trading LLC or partnership; an S-corp for salary and retirement if you qualify for TTS; a holding company for a future fund GP.
- QSBS (§1202) generally excludes investing, brokerage, and financial-services businesses [32]; it matters only for stakes in qualifying operating C-corps.

REGULATORY STATUS

- Qualified-client status unlocks performance-fee accounts and 3(c)(1) funds that charge carry [35].
- Owning more than 5% of a company's voting class triggers Schedule 13D or 13G — possible in small caps [41].

OPPORTUNITIES

- Hedge funds and private-equity funds open to accredited and qualified clients; co-investments are still rare at this size.
- Starting a small fund: GP/LP structure, a 3(c)(1) fund (up to 100 beneficial owners, accredited investors), with fund admin, audit, and legal costs that are often tens of thousands of dollars a year.

TEAM & INFRASTRUCTURE

- Wealth adviser or private banker, a CPA firm, an estate attorney, and a securities attorney before raising any outside capital.

FAILURE MODES & GUARDRAILS

- Launching a fund turns trading risk into business, regulatory, and reputational risk; marketing rules apply.
- Correlated short-vol across multiple accounts is still one position.

IN THIS APP

- **Risk profile** — chart hedges and collars against the core.
- **Dashboard** — watch the whole balance sheet, not just the sleeve.

$5M → $10M

Stage 7 · Qualified purchaser

Qualified-purchaser status opens the institutional-only fund universe, and private-bank lending gets serious.

WHAT SUCCESS LOOKS LIKE

- Several uncorrelated return sources, risk managed at portfolio level with VaR and stress tests.
- A clear capital plan: personal liquidity, trading capital, illiquid alternatives, and philanthropy.

OPTIONS STRATEGIES

- Custom hedges via FLEX options [17]; collars and bank-arranged prepaid variable forwards on concentrated stock (tax-sensitive).
- An individual with more than $5M invested may enter swaps to hedge an asset or liability as a "hedging individual" eligible contract participant [38].
- Systematic option overlays (put-writing, covered calls) sized to the whole portfolio.

BROKERAGES & PLATFORMS

- Goldman Sachs Private Wealth Management generally requires $10M of investable assets [47]; J.P. Morgan Private Bank publishes no minimum (about $10M is often cited) — treat as indicative.
- IBKR Prime (execute away, settle at IBKR) needs $1M for Reg T and $6M for portfolio margin [14].

ACCOUNT FEATURES & THRESHOLDS

- Qualified purchaser: an individual with at least $5M in investments [36] — eligible for 3(c)(7) funds, which have no 100-investor cap.
- Cross-margining options against futures is still generally limited to clearing members and market professionals [20].

BANKING & CREDIT

- Private bank credit: tighter SBLOC spreads, custom advance rates on concentrated stock, and specialty lending (art, aircraft), plus trust services.
- Lombard loans in multiple currencies; credit lines to meet capital calls from private funds.

TAXES & ENTITIES

- Advanced estate planning: GRATs, intentionally defective grantor trusts, dynasty trusts in favorable states, and gifting fund interests at valuation discounts — attorney territory.
- Charitable vehicles: donor-advised funds and charitable remainder trusts for appreciated assets.

REGULATORY STATUS

- Qualified purchaser [36]; hedging-individual ECP [38].
- An adviser managing under $150M solely in private funds can rely on the private-fund-adviser exemption and file as an exempt reporting adviser [42].

OPPORTUNITIES

- 3(c)(7) hedge funds, PE and VC funds, private credit, real estate funds; bank-sourced co-investments; custom structured notes.
- IPO and secondary allocations through private-wealth desks — relationship-driven and never guaranteed [47].

TEAM & INFRASTRUCTURE

- An outsourced CIO or multi-family office; a fund administrator if you run a fund; a compliance consultant.

FAILURE MODES & GUARDRAILS

- Fee drag and illiquidity in alternatives; entity sprawl nobody fully understands.
- Loans against concentrated positions can force sales in a drawdown.

IN THIS APP

- **Accounts** — keep entity and custodian accounts separated.
- **Portfolio allocation** — size the risk sleeve against total investable assets.

$10M → $25M

Stage 8 · OTC access

Eligible-contract-participant status opens bilateral OTC derivatives with dealers under ISDA documentation.

WHAT SUCCESS LOOKS LIKE

- Institutional-grade operations: independent pricing, daily reconciliation, and documented limits that someone other than the trader checks.

OPTIONS STRATEGIES

- OTC options and swaps with bank dealers: custom strikes, baskets, Asian and barrier options, variance swaps, and total-return swaps — under an ISDA Master Agreement and Credit Support Annex (collateral terms).
- Dispersion trades (sell index vol, buy constituent vol) at institutional scale, with careful correlation risk [18].
- A tail-hedging program (rolling OTM SPX puts or VIX calls) budgeted as insurance.

BROKERAGES & PLATFORMS

- A prime broker (or IBKR Prime) for financing, securities lending, and consolidated custody; executing brokers for agency algos (VWAP, TWAP) and direct market access.
- OTC dealer relationships (swap desks) require ECP status and credit approval.

ACCOUNT FEATURES & THRESHOLDS

- Eligible contract participant: an individual with more than $10M invested on a discretionary basis (or $5M if hedging) [38] — required for uncleared swaps off-exchange.
- Large trader (Form 13H) once NMS-security transactions reach 2M shares or $20M in a day, or 20M shares or $200M in a month [39].

BANKING & CREDIT

- Committed credit facilities from private banks; financing through prime brokers; repo for Treasuries.

TAXES & ENTITIES

- Swaps and OTC options are not §1256 contracts [24]; straddle (§1092) and constructive-sale (§1259) rules need a specialist.
- Residency and trust situs planning for state taxes.

REGULATORY STATUS

- ECP status [38]; 13H if active [39]; LOPR reporting and position limits on large option books [22].

OPPORTUNITIES

- Bespoke OTC hedges, private-credit co-investments, direct real estate; seeding or anchoring emerging managers.

TEAM & INFRASTRUCTURE

- A CFO or controller, outside counsel for fund formation and ISDA negotiation, a fund administrator, an auditor, and a part-time CCO if registered.

FAILURE MODES & GUARDRAILS

- Counterparty risk lives in the CSA collateral terms (the 2008 lesson). Use more than one dealer.
- OTC products are opaque — get independent valuations.

IN THIS APP

- **Risk profile** — sanity-check listed-equivalent payoffs of OTC structures.

$25M → $100M

Stage 9 · Emerging manager or family office

Either run outside capital as an emerging fund or formalize a family office; institutional infrastructure becomes mandatory.

WHAT SUCCESS LOOKS LIKE

- Ready for institutional due diligence: audited financials, an operational due-diligence packet, an independent administrator, and written compliance policies.
- A capacity study: how much capital the strategy absorbs before slippage eats the edge.

OPTIONS STRATEGIES

- A multi-strategy volatility book: index premium, term and skew relative value, dispersion, tail hedges, and futures options.
- Block trades and RFQ for large SPX and /ES positions; FLEX for custom hedges [17].
- Position limits matter: single-name options carry 25k–250k contract limits by name (SPY 3.6M); SPX has no position limit but is still reported [22].

BROKERAGES & PLATFORMS

- Two or more prime brokers for counterparty diversification; algorithmic execution with transaction-cost analysis.
- Institutional data (full OPRA depth, historical vol surfaces) and a vendor or in-house risk system.

ACCOUNT FEATURES & THRESHOLDS

- Form 13F once you have discretion over $100M+ of 13(f) securities on any month-end [40].
- SEC-registered advisers with $150M+ of private-fund assets file Form PF [42].

BANKING & CREDIT

- Fund subscription lines, prime financing, and repo; for a family office, bespoke private-bank credit for real estate and aviation.

TAXES & ENTITIES

- Fund structures: a domestic LP plus an offshore (often Cayman) feeder for tax-exempt and non-US investors; carried interest needs a 3-year hold for long-term treatment.
- Family-office management-company structures and expense deductibility are fact-specific — get current advice from tax counsel.

REGULATORY STATUS

- SEC registration generally starts at $110M of regulatory AUM (under $100M usually registers with the state) unless an exemption applies [42].
- A single-family office can sit outside the Advisers Act if it serves only family clients, is family-owned and controlled, and does not hold itself out to the public [43]. The usual rule of thumb is that a dedicated SFO pays for itself around $100M+.
- Futures in a pooled vehicle require CPO registration unless exempt — e.g. Rule 4.13(a)(3) de minimis: margin and premiums ≤ 5% of liquidation value, or net notional ≤ 100% [44].

OPPORTUNITIES

- Direct PE and VC co-investments, secondaries, and GP stakes; anchor allocations from seeders and funds of funds.
- Better IPO allocations once you are an institutional account known for holding.

TEAM & INFRASTRUCTURE

- COO/CFO, CCO, head of trading, risk manager, fund administrator, auditor, outside counsel, and a cybersecurity program.

FAILURE MODES & GUARDRAILS

- Key-person and operational risk (reconciliation breaks, fat fingers) — require a second approver on large orders.
- Redemptions in drawdowns force selling; match investor liquidity terms to the strategy.

IN THIS APP

- **Backtesting** — document rules-based replays for due diligence.

$100M → $500M

Stage 10 · Institutional

You are an institution: reporting regimes, position limits, and market impact shape every decision.

WHAT SUCCESS LOOKS LIKE

- Risk-adjusted returns net of fees and market impact; drawdowns small enough to keep institutional investors through a bad year.

OPTIONS STRATEGIES

- Index vol relative value at scale: listed variance futures and OTC variance or volatility swaps [19]; dispersion and correlation trades [18].
- Liquidity provision: some firms make markets or act as designated liquidity providers — which needs broker-dealer registration or exchange membership and real capital.

BROKERAGES & PLATFORMS

- Several prime brokers and swap dealers (total-return swaps for synthetic exposure), securities-lending desks, and direct exchange connectivity for latency-sensitive strategies.

ACCOUNT FEATURES & THRESHOLDS

- Entities owning and investing at least $100M in non-affiliated securities qualify as QIBs, opening Rule 144A offerings [37].
- Quarterly 13F [40]; Schedule 13D within five business days of crossing 5% [41]; 13H [39].

BANKING & CREDIT

- Revolving credit facilities, repo lines, and margin optimization across prime brokers; a dedicated treasury function.

TAXES & ENTITIES

- Master-feeder and parallel fund structures, withholding and treaty planning for offshore investors; §475 at the fund level where it fits.

REGULATORY STATUS

- An SEC-registered adviser with a full compliance program (CCO, code of ethics, marketing rule) and Form PF; CPO or CTA registration with the NFA when futures are significant [44].
- A CFTC proposal (August 2026) would let some SEC-registered advisers skip CPO registration — proposed, not final [45].

OPPORTUNITIES

- Anchor and cornerstone IPO allocations, private placements, capital-markets access, and seeding other managers.

TEAM & INFRASTRUCTURE

- Portfolio managers, risk, quant research, technology, operations, legal and compliance, and investor relations.

FAILURE MODES & GUARDRAILS

- Crowded trades and liquidity crises (2008, March 2020): stress for correlation jumps and margin hikes at the same time.
- Regulatory misses — late 13D filings, position-limit breaches — bring fines and reputational damage.

IN THIS APP

- **GEX advisory** — dealer positioning still frames where large orders will move price.

$500M → $1B

Stage 11 · Large institutional

Capital is limited by capacity, counterparties, and regulation more than by ideas.

WHAT SUCCESS LOOKS LIKE

- Repeatable, documented investment process that survives the departure of any one person; capacity-aware sizing across strategies.

OPTIONS STRATEGIES

- Bespoke OTC structures with multiple dealers, exchange block and RFQ liquidity, and cross-asset volatility (rates, FX, commodities) alongside equity options.
- Position limits and market impact force splitting trades across expirations, underlyings (SPX, /ES, SPY), and venues [22].

BROKERAGES & PLATFORMS

- Full prime relationships with term financing commitments, synthetic prime (swaps), and agency execution with venue analysis.

ACCOUNT FEATURES & THRESHOLDS

- All reporting regimes are active (13F, 13D/G, 13H, Form PF, LOPR) [40,41,39,22]; position aggregation across affiliated accounts.

BANKING & CREDIT

- Committed lines from several banks, repo and securities-lending programs at scale, and multi-currency treasury.

TAXES & ENTITIES

- Firm-level tax structure (management company, GP entities, offshore vehicles); for a personal fortune, multi-generational trusts and philanthropy at scale.

REGULATORY STATUS

- Exams and inquiries from the SEC, CFTC/NFA, and FINRA are routine; every market you trade adds a regulator.

OPPORTUNITIES

- Strategic stakes, platform deals (buying or seeding managers), and private-market access usually reserved for the largest allocators.

TEAM & INFRASTRUCTURE

- A formal governance layer: independent risk committee, board or advisory board, and external audits of controls.

FAILURE MODES & GUARDRAILS

- Size itself is the risk: you are the market in thinner names. Concentration limits and liquidity buckets are mandatory.

IN THIS APP

- **Dashboard** — a top-level view still beats spreadsheets nobody reads.

$1B and beyond

Stage 12 · Billion-dollar platform

At $1B a fortune or firm is an institution with many stakeholders; the work shifts to governance, legacy, and preserving capital.

WHAT SUCCESS LOOKS LIKE

- Capital preservation across generations or market cycles; returns measured against the cost of capital and inflation, not against last year's best month.

OPTIONS STRATEGIES

- Overlay programs (index collars, tail hedges, variance) protect the whole portfolio; active options trading becomes one strategy among many, run by dedicated teams [19].

BROKERAGES & PLATFORMS

- Multi-prime, multi-dealer relationships; direct custody at a global custodian; in-house execution desk.

ACCOUNT FEATURES & THRESHOLDS

- Every reporting threshold is crossed; jurisdiction and entity choices (onshore and offshore) are a standing project.

BANKING & CREDIT

- Global private banks and investment banks compete for the relationship: bespoke lending, capital-markets access, and syndicate allocations.

TAXES & ENTITIES

- Single-family office, dynasty and charitable trusts, private foundations; the $15M per-person estate exemption [30] is small at this scale, so planning centers on trusts and valuation.

REGULATORY STATUS

- An SFO relying on the family-office exclusion [43], or a registered adviser with the full institutional regime.

OPPORTUNITIES

- Direct ownership of operating businesses, anchoring funds, endowment-style portfolios, and impact or philanthropic programs.

TEAM & INFRASTRUCTURE

- CIO, CFO, general counsel, CCO, risk, tax, and a board; outside advisers keep each other honest.

FAILURE MODES & GUARDRAILS

- Governance failures, key-person risk, and leverage hidden in swaps (the 2021 Archegos family office collapse) — total-return-swap exposure must be visible to every counterparty's risk team and your own.

IN THIS APP

- **Dashboard** — one honest view of the whole balance sheet.

Unlocks by stage

STAGE	OPTIONS ACCESS	MARGIN & BROKERAGE	BANKING & CREDIT	TAX & ENTITIES	REGULATORY STATUS
Stage 1 $0 → $10k	Long, covered, cash-secured; spreads with approval	Cash or $2k margin; no PDT since 2026-06-04	Checking, HYSA, FDIC / SIPC basics	Short-term rates; wash sales; Roth IRA	Retail
Stage 2 $10k → $25k	Verticals, iron condors, calendars; XSP	Margin spreads level; micro futures	Treasury sweep; credit score	§1256 60/40; quarterly estimates	Retail
Stage 3 $25k → $100k	SPX / NDX / RUT index spreads; hedges	Uncovered approval; futures options	Private client $150k+; margin loan	TTS and §475(f) decision; Solo 401(k) if self-employed	Accredited by income possible
Stage 4 $100k → $500k	Undefined risk possible; /ES options	Portfolio margin $110k–$150k to open	SBLOC / PAL from $100k; asset-based mortgages	Trading entity; investment interest	Accredited by net worth near
Stage 5 $500k → $1M	Earnings vol, dispersion ideas	RFQ for size; multiple brokers	Private client $1M+; Lombard loans	Residency, DAF, loss harvesting	Accredited investor
Stage 6 $1M → $5M	FLEX, variance futures, collars	Private-wealth custody + pro execution	Tighter SBLOC spreads; pledged-asset mortgages	$15M estate exemption; trusts; fund GP entity	Qualified client ($2.7M NW)
Stage 7 $5M → $10M	Hedging swaps; portfolio overlays	IBKR Prime $1M / $6M PM	Private bank ~$10M; capital-call lines	GRATs, dynasty trusts, CRTs	Qualified purchaser ($5M)
Stage 8 $10M → $25M	OTC options, variance swaps, TRS (ISDA / CSA)	Prime brokerage; DMA and algos	Committed facilities; repo	Swap and straddle rules	ECP ($10M); 13H large trader
Stage 9 $25M → $100M	Multi-strat vol book; blocks	Multi-prime; institutional data	Subscription lines; prime financing	Master-feeder; carry	RIA / ERA, CPO / CTA; 13F at $100M
Stage 10 $100M → $500M	Variance and dispersion at scale; liquidity provision	Swap dealers; securities lending	Revolvers and repo lines	Fund-level §475; treaty planning	QIB ($100M); 13D / G; Form PF
Stage 11 $500M → $1B	Cross-asset vol; split across venues	Term financing; synthetic prime	Multi-bank committed lines	Management-company structure	Full reporting regime
Stage 12 $1B and beyond	Portfolio overlays by dedicated teams	Global custodian; in-house desk	Bespoke lending; syndicate access	SFO, dynasty trusts, foundations	Family-office exclusion or RIA

Not advice. Educational only — not financial, tax, or legal advice. Options involve substantial risk and are not suitable for every investor; read the OCC options disclosure document (Characteristics and Risks of Standardized Options) before trading. Thresholds and rules below are US-federal, were checked on the date shown, vary by broker and state, and change — verify with the firm and a licensed professional before acting. Nothing here promises or implies returns, and most traders never reach the later stages.
